

Turbo Colostrum

Additional supply of natural immunoglobulins

Turbo Colostrum is a complementary feed created for new-born animals that received colostrum of insufficient quality or quantity. It is very important that new-born ruminants are given sufficient colostrum directly after birth.

Young animals need the immunoglobulins for developing their immune system. If there is not enough or no good colostrum fed, health problems will always occur.

The dosage is dependent on the colostrum quality and quantity as well as the pathogenic pressure.

- For a safe and natural supply of immunoglobulins
- High level of nutritional additives
- Optimal support for the immune system

Turbo Colostrum

Additional supply of natural immunoglobulins

Suitable for:

Calves, lambs and goat kids.

Application methods:

Dissolve the powder in warm (ca. 39 °C) colostrum, milk or milk replacer and start feeding within the first 6 hours of life.

As colostrum supplement:

Calves: 50-100 g / animal / day
Lambs / Goat kids: 5-10 g / animal /day

As colostrum replacer:

Calves: 200 g / 2 L milk
Lambs / Goat kids: 20 g / 0.2 L milk

One heaped measuring spoon = approx. 15 g Turbo Colostrum

Apply Turbo Colostrum for the first 3-5 days of life.
